## LAMINATION SERVICES

- Custom Sizes
- Large Production Capacity
- High Quality Lamination
- Quick Turnaround
- Inventory Management

## CAPACITY

With a production capacity of over 10,000 panels per week, we are equipped to meet your needs at a moment's notice.

## FLEXIBILITY

Small quantities or short lead time? We require no minimum order quantity (MOQ) and can do short notice orders. Everything is packaged according to your needs and specifications.

## CUSTOMIZATION

Your specifications are important to us. We produce your desired thickness with the right core and cut your panels to the size you need.

## RESOURCE OPTIMIZATION

Boost your organization's efficiency by subcontracting your lamination and by allocating your time to more strategic areas. Free up floor space and reconfigure your facility to optimize every square foot.

## ANALYSIS

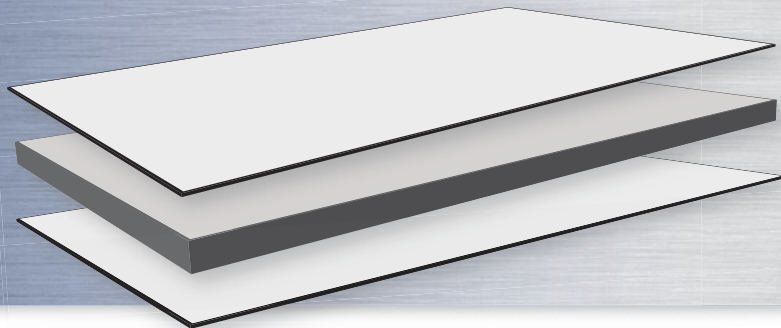

Our sales force meets with you to analyze your needs. Our Research & Development department is here to help you choose the right substrate for the right surface.

## QUALITY

Our new automated lamination machine is exceptionally efficient and consistent, so we deliver sustained production at top speed with no rejected material or waste. Our high quality finishing means your panels arrive ready for use.

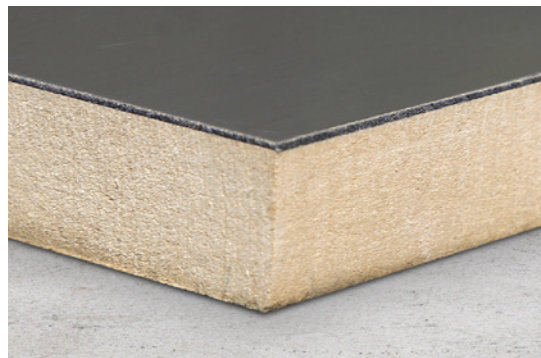

# CORE OPTIONS

## MDF/HDF

Medium- to high-density wood fiber composite cores are ideal for maximum flatness and strength. The smooth finish makes it a material of choice for even the thinnest steel sheets.

## HONEYCOMB CARDBOARD

This core is made of residual wood particles. It's cost effective and ideal for steel sheets over 0.7 mm thick.

## PLYWOOD

These panels are made of thin sheets of wood of various thicknesses—called veneers or plies—that are glued together under high pressure. Excellent screw-in support.

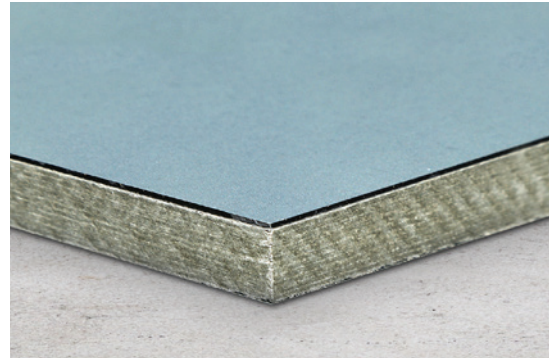

## FIBERBOARD

This core is made from natural recycled and recyclable wood fiber and non-toxic organic products. Very light and economical.

## FIBROCEMENT BOARD

Ideal for outdoor use, so it pairs perfectly with our Lamtop, Exelam, and Fortilam surfaces or your own custom material.

## GYPSUM BOARD

Cost-effective gypsum is the ideal panel to be laminated then cut at our cutting center for precision down to the millimeter. This fire-resistant, inert material does not require a backing sheet, so you save even more.

## EXTRUDED POLYSTYRENE (XPS)

This substrate option makes for a very light panel with insulation value.

## CUSTOM

Our sales team works hand in hand with our R&D department to help you choose the right panel for your project.

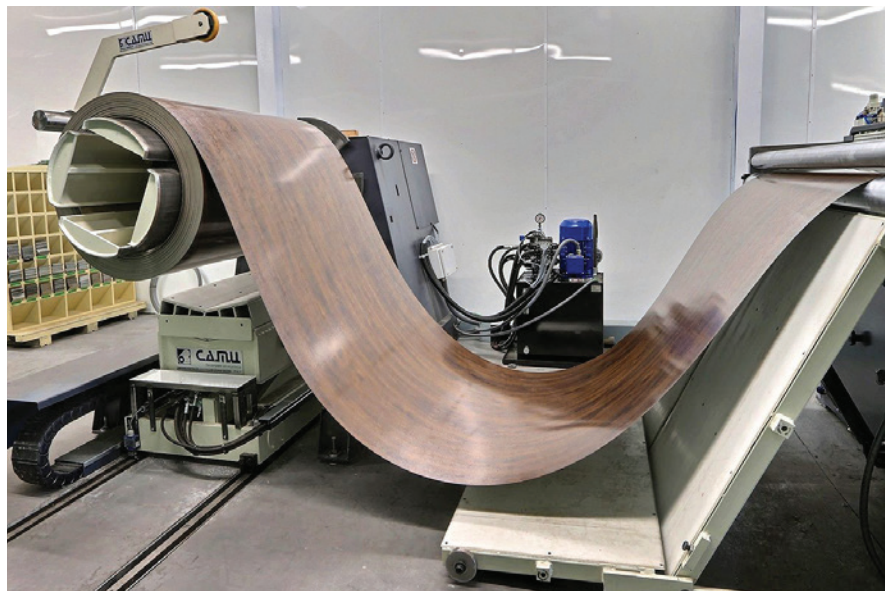

## INVENTORY MANAGEMENT

CBBC has expanded its storage and manufacturing space over the past five years. Inventory can be stored for up to 6 months in a 60,000 sq. ft. warehouse.

## CUTTING LINE

With three cutting lines and a new automated line, CBBC can process orders quickly and easily, no matter what dimensions you need.

## CUSTOM SIZE

Over the years, CBBC has built a reputation for offering top-notch custom lamination services. Our team closely analyzes your project to determine the best solution (thickness and surfaces) to meet your requirements and expectations. CBBC is attentive to your needs and offers the best quality at the best price. We can cut your panels to the dimensions required for your projects to avoid additional handling and save valuable production time.

## PACKAGING & TRANSPORT

Our shipping department can prepare your packaging according to your specifications to optimize transport. Whether it's on our trucks or with a private company, your merchandise will arrive on time, no matter what.

## Since 1932

CBBC is a leading manufacturer of whiteboard and chalkboard surfaces and has been a proud distributor of Lampre products in Canada and the U.S. for over 15 years. With our cutting, rolling, and inventory management services all under one roof, we offer one-stop convenience. Over the past five years, we have expanded our storage and manufacturing space and added an automated cutting line. Our sales team boasts over 40 years' experience in the North American market.
